

Optomap® screening images are wide-angle retinal photos that do not require dilation drops. They allow your doctor to spot signs of high blood pressure, cardiovascular disease, diabetes, plaques that can cause strokes, retinal tears, macular degeneration, glaucoma, and many other eye diseases.

They are a permanent addition to your health record for easy comparison and continuity of care from year-to-year. These photos are \$29.

_____ I choose to have Optomap retinal images (\$29)

_____ I decline images

Patient Signature _____ Date _____

Guardian Signature (if under 18) _____ Date _____
